Description

Background

To reconcile transactions, the client provides supporting documents for transactions that are Missing an Attachment. They can attach a document directly to a specific transaction, or send documents in bulk (in-app, email, or WhatsApp). Bulk documents go into a pool and the system OCR+AI engine matches each one to its transaction automatically. Once a document is attached, the transaction becomes Attachment Added and the reconciliation matching runs.

Goal

Let the client supply supporting documents — per-transaction or in bulk via in-app / email / WhatsApp — with bulk documents auto-matched to transactions, so Missing Attachment transactions become Attachment Added.

Acceptance Criteria

1. Attach a document to a specific transaction

GIVEN a transaction with Missing Attachment
WHEN the client uploads a document via its per-transaction upload
THEN the document is attached to that transaction
AND the transaction status changes to Attachment Added and reconciliation matching is triggered

1. In-app bulk upload

GIVEN the client is on the Missing Attachment list
WHEN they drag/drop or select multiple files
THEN the documents are submitted to the documents pool for auto-matching (see AC4)

1. Send documents by email or WhatsApp

GIVEN the client has supporting documents to send
WHEN they send one or multiple documents via the email forwarding address or WhatsApp
THEN the documents are received into the documents pool for auto-matching (see AC4)

1. Bulk documents are auto-matched to transactions

GIVEN documents are in the pool (from in-app bulk, email, or WhatsApp)
WHEN the system runs OCR+AI matching
THEN each document is matched to its transaction and that transaction becomes Attachment Added
AND a document that cannot be matched is flagged for review (see AC5)

1. Unmatched documents are flagged

GIVEN a pooled document that the engine cannot match to a transaction
WHEN matching completes
THEN the document is flagged as unmatched for follow-up (client prompt and/or accountant review)

1. File rules

GIVEN the client uploads or sends a document
THEN only accepted file types and size are allowed (see File Rules table)
AND invalid or duplicate files are rejected with an error

Rules

Upload Methods

Method	Behaviour
Per-transaction upload	Attach directly to one transaction (immediate Attachment Added)
In-app bulk upload	Multiple files from the Missing Attachment list → pool
Email	Single/multiple documents to the forwarding address → pool
WhatsApp	Documents sent via WhatsApp → pool

File Rules

Rule	Value
Accepted formats	PDF, JPG, PNG
Max size	25 MB (To be confirmed by Tech Team)
Duplicate / invalid	Rejected with an error

Matching

Source	Matching
Per-transaction	Attached to that transaction directly
Bulk (in-app / email / WhatsApp)	Pooled, then OCR+AI auto-matches each to its transaction; unmatched documents flagged

Notes

- Client platform only. The OCR+AI matching is the same reconciliation engine.
- Attaching a document moves the transaction to Attachment Added and triggers reconciliation matching.
- Email and WhatsApp intake rely on the channels configured in the deferred Docs Collection / settings block.
- An unmatchable pooled document sits for the accountant
- Single transaction have multiple attachments

Importing Supporting Documents
