Description

Background

On the admin (accountant) platform, the operator selects a client and works that client's purchase invoices from the Purchase Invoice List. Unlike the client, the accountant has full access — they can act on invoices directly from the list and open them for the complete set of actions. The list surfaces accounting-relevant detail (COA, completeness, OCR confidence) the client never sees.

Goal

Give the accountant a per-client Purchase Invoice List with summary totals, alerts, accounting columns, search/sort, and quick row actions, plus full access to open and act on any invoice.

Acceptance Criteria

1. Select a client and view their Purchase Invoice List

GIVEN the operator selects a client
WHEN the Purchase Invoice List loads
THEN it shows that client's purchase invoices with summary totals (To be paid / Done) and overdue / incomplete alerts
AND the table shows the columns in the Columns table (base columns plus Account/COA, Completeness, and OCR confidence)

1. Search and sort the list

GIVEN the Purchase Invoice List is displayed
WHEN the operator types into Search or clicks a sortable column header
THEN the list is filtered or re-ordered accordingly

1. Act on an invoice from the list or on open

GIVEN the list is displayed
WHEN the operator uses a row's quick action
THEN they can act on the invoice directly per the Quick Actions table
AND opening an invoice gives the full set of actions (Story A2)

1. Status, completeness and confidence are shown with alerts

GIVEN invoices are displayed
THEN each invoice shows its Status (To Pay, Paid, Rejected; Overdue as a flag on a To Pay invoice past its due date), Completeness (No match / Missing details / Imported), and OCR confidence
AND the system alerts the operator on overdue payments, incomplete invoices, and low-confidence items

1. Accountant has full edit access

GIVEN the operator is on the Purchase Invoice List
THEN they can view, search, sort, open, and act on invoices — including edit/amend, reclassify (COA), reject, mark as paid, and reconcile
AND this is in contrast to the client, who is upload-only

Rules

Columns

Column	Display Rule	Admin-only
Invoice Number	INV-YYYY#####	No
Supplier Company Name	Saved supplier company name	No
Status	To Pay / Paid / Rejected (Overdue = flag past Due Date)	No
Due Date	MMM DD, YYYY	No
Issue Date	MMM DD, YYYY	No
Amount in Invoice Currency	Currency abbr + amount, 2 dp	No
Account / COA	Chart-of-account assignment	Yes
Completeness	No match detected / Missing details / Imported	Yes
OCR confidence	Confidence score from auto-classification	Yes

Summary & Alerts

Element	Behaviour
Payment totals	To be paid / Done amounts (for the selected client)
Overdue alert	Alerts on To Pay invoices past Due Date
Incomplete alert	Alerts on incomplete invoices (Missing details / No match)
Low-confidence alert	Alerts on items below the OCR confidence threshold

Quick Actions (list row)

Action	Behaviour
Open	Open the invoice for full actions (Story A2)
Reject	Reject with reason (full flow in Story A2)
Mark as paid	Mark settled outside the platform
Reconcile	Match to a bank transaction

Admin Permissions

Action	Allowed?
View / Search / Sort / Open	Yes
Edit / Amend / Reclassify (COA)	Yes
Reject / Mark as paid / Reconcile	Yes

Notes

- Admin platform only; the list is scoped to one selected client at a time.
- Detailed per-invoice actions and the status flow (amend, reject + reason, mark-as-paid, confirm, reconcile) are specified in Story A2.
- Status terminology aligned across platforms: To Pay / Paid / Rejected, Overdue as a flag (no "void").

Things Not Clear (To be resolved with Block 3)

- Exact set of quick actions exposed on list rows vs only in the open invoice (proposed: Open, Reject, Mark as paid, Reconcile).
- OCR confidence: the threshold that triggers the low-confidence alert, and whether confidence is shown as a score or a flag.
