Description

Background

In Block 1 (Sales Invoice) of the Statrys accounting feature, clients need to raise sales invoices directly in the mobile app, send them to their customers, and have them resolve to Paid once the money arrives — connecting the accounting side to the payment side.

Goal

Let a client create, issue, send, and resolve a sales invoice through its full status lifecycle (Draft → Awaiting Payment → Overdue / Partially Paid / Paid / Void) from the mobile app.

Acceptance Criteria

1. Create and fill a draft invoice

GIVEN a client is on the invoice list
WHEN they select "Create Invoice"
THEN the system creates an invoice in **Draft** status (editable) and displays the create-invoice form
AND the client can select a client/customer, line items, currency, and a **due date**
AND a Draft invoice can be deleted (removed from system); deletion is only available in Draft

1. Issue the invoice

GIVEN a valid draft invoice
WHEN the client selects "Create" / issue
THEN the system **generates the invoice number**, validates required fields, and moves the invoice to **Awaiting Payment**
AND the invoice number cannot be changed after issuing

1. Send the invoice from the app

GIVEN an issued (Awaiting Payment) invoice
WHEN the client chooses to send it
THEN the system emails it as a PDF to the client's stored Email Address **and/or** generates a shareable link
AND if the client has no Email Address on file, the system prompts to add one while the shareable link remains available

1. Edit an issued invoice

GIVEN an invoice in Awaiting Payment or Overdue status
WHEN the client makes a permitted edit
THEN the system applies the limited edit, regenerates the invoice document, and re-sends / notifies the customer

1. Cancel an issued invoice with a Credit Note

GIVEN an invoice in Awaiting Payment or Overdue status
WHEN the client selects "Cancel with Credit Note" and completes the Credit Note flow
THEN the invoice moves to **Void** (non-editable)

1. Reconcile against a payment

GIVEN an issued invoice and incoming transactions on the payment side
WHEN the system auto-suggests a matching transaction and the client confirms the match
THEN the system sets the status based on the matched amount (see Reconciliation Outcomes below)
AND a fully matched invoice becomes **Paid** (non-editable)

Rules

Invoice Status Matrix

Status	Editable?	Entered When	Deletable?	Terminal?
Draft	Yes	On create, before issuing	Yes	No
Awaiting Payment	Limited	Invoice issued	No	No
Overdue	Limited	Awaiting Payment and due date has passed, unpaid (client is notified)	No	No
Partially Paid	No	Reconciliation matches a payment less than the total	No	No
Paid	No	Reconciliation matches the full total (or overpayment)	No	Yes
Void	No	Cancel with Credit Note completed	No	Yes

Reconciliation Outcomes

Matched Amount vs Invoice Total	Resulting Status
Equal to total	Paid
Less than total	Partially Paid (remainder still due)
Greater than total	Paid, with the overpayment flagged for review (credit/refund)

Send Channels

Channel	Detail
Email	PDF sent to the client's stored Email Address (prompt to add one if missing)
Shareable link	Link the client can share with the customer; always available

Notes

- Surface: created and sent from the **mobile app**; the Operation Manager **back office is web**.
- **Overdue** notifies the Statrys client (the sender) only — they decide whether to chase the customer. "Overdue" itself is a time-based transition, not a user action.
- **Editing an issued invoice** is limited and regenerates + re-sends the document; this differs from the Edit Client rule, which only propagates client-detail changes to draft invoices.
- **Reconciliation** here is covered at the status-outcome level; the detailed transaction-matching mechanism (how candidates are surfaced and confirmed) is a separate story.
- Out of scope: the Credit Note flow itself (referenced) and the overpayment resolution mechanics (credit note vs refund), which are flagged for the client / back office.

Workflow Diagram

Create Sales Invoice — Flow

Grey draft · Amber awaiting · Orange overdue · Green paid · Blue partial · Red void / error

Paid / Partially Paid / Overpayment are reached via reconciliation — the system auto-suggests a matching transaction and the client confirms.
