Description

Background

Once a sales invoice is issued, the client needs to deliver it to their customer. In Block 1 (Sales Invoice), sending must be flexible — by email (with a customisable, previewed message), by a shareable link, or by download — so getting paid feels effortless.

Goal

Let a client send an issued sales invoice by email (pre-filled and editable, with a live preview), generate a shareable link, or download the invoice, and record that it was sent.

Acceptance Criteria

1. Open the Send screen and choose a method

GIVEN an issued invoice (Awaiting Payment)
WHEN the client opens the Send screen
THEN the system displays three send methods: Send Email, Shareable Link, and Download
AND the client selects one (see Send Methods below)

1. Pre-fill and edit the email form

GIVEN the client selects Send Email
WHEN the Email form opens
THEN the system pre-fills the recipient, subject, and message fields, all editable (see Email Form Fields below)
AND the client can add multiple recipients (comma-separated), tick "Put me in cc", and save the adapted content as the default for that client's future invoices

1. Live email preview

GIVEN the Email form is open
WHEN the client edits any field
THEN the system updates the email preview in real time to reflect the input

1. Send the email

GIVEN the client has reviewed the Email form
WHEN they select "Send invoice"
THEN the system validates the recipient address(es) and sends the email containing a button/link to open the invoice (see Email Content below)
AND on success the invoice is marked **Sent** (with a timestamp); the status remains Awaiting Payment
AND if an address is invalid or delivery fails, the system shows a clear error, keeps the entered content, and lets the client correct and resend

1. Generate a shareable link

GIVEN the client selects Shareable Link
WHEN the system generates the link
THEN it copies a permanent, no-login link to the clipboard and confirms
AND the invoice is marked **Sent** when the link is generated

1. **Download the invoice**

GIVEN the client selects Download
WHEN the system prepares the invoice
THEN it downloads the invoice as a PDF to the device

Rules

Send Methods

Method	Outcome
Send Email	Opens the editable email form + live preview; sends an email with a link to open the invoice
Shareable Link	Generates a permanent, no-login link and copies it to the clipboard
Download	Downloads the invoice as a PDF to the device

Email Form Fields

Field	Expected Behaviour	Notes
Send to	Pre-fills the client's email if available	Editable; multiple addresses comma-separated
Put me in cc	Checkbox to cc the user's own email	Saved as a per-client default for future invoices
Subject	Pre-filled with standard default text	Editable
Message	Pre-filled with standard text	Editable
Email preview	Image preview displayed	Updates in real time as the form changes

Email Content

Element	Detail
Open invoice	Button/link that opens the invoice (Client portal)
Invoice details	Invoice number, total amount, due date
Payment reference	Reference for the customer to quote when paying

Notes

- Surface: client side is the **mobile app**; the Operation Manager **back office is web**.
- Enabling the **Client portal** lets customers track (and pay) their invoices; the email "Open invoice" button points there.
- Adapted email content (subject, message, cc preference) is saved as a **per-client default** and applied to that client's draft and future invoices.
- Sending is available once the invoice is issued (Awaiting Payment). For uploaded record-only invoices, sending is optional (see STORY4_upload_sales_invoice.md).
- Out of scope: building the Client portal itself, the Credit Note flow, and reconciliation/payment matching.

Additional Things

- **Sent marker** mixes channel (emailed vs link generated vs downloaded), and is re-sending tracked separately?
- For the **shareable link** — no view/open tracking expected
- **Download filename** is invoice number

Workflow Diagram

Send Sales Invoice — Flow

Three methods: Email (editable + live preview), Shareable Link, Download - Green = sent - Red = error
