Description

Background

Clients often issue sales invoices outside Statrys (their own templates, other tools). In Block 1, they need to bring those invoices into the app by uploading a file, letting OCR extract the details, and tracking the invoice through the same status lifecycle so it can be reconciled against incoming payments.

Goal

Let a client upload an existing sales invoice, have OCR map it to invoice fields for review, then issue and resolve it through its status lifecycle — with the invoice number taken from the user's input rather than system-generated.

Acceptance Criteria

1. Upload an invoice file

GIVEN a client is on the invoice list
WHEN they select "Upload Invoice" and select or drag a file into the upload area
THEN the system accepts a PDF, JPG, or PNG within the size limit (see File Constraints below)
AND rejects an unreadable, oversized, or unsupported file with a clear reason

1. Extract details by OCR for review

GIVEN a valid uploaded file
WHEN the system reads it and maps fields by OCR [KR: Details required on invoice is not listed here. Please see Story 15 > Rules > Fields. These fields apply to Client Facing side also]
THEN it creates an invoice in **Draft** status (editable) pre-filled with the extracted values for the client to review and edit
AND low-confidence fields are flagged for the client to verify, and other OCR problems are handled per the OCR Failure Handling table below
AND a Draft invoice can be deleted (removed from system); deletion is only available in Draft

1. Issue the invoice using the user-entered invoice number

GIVEN a reviewed draft uploaded invoice
WHEN the client selects "Create" / issue
THEN the system uses the **invoice number from the user's input** (not system-generated), validates required fields, and moves the invoice to **Awaiting Payment**
AND if that invoice number already exists, the system warns of the duplicate but allows the client to override

1. Send is optional

GIVEN an uploaded invoice in Awaiting Payment
WHEN the client reviews sending options

THEN the default is **record-only** (the invoice was sent another way)
AND the client may optionally send it from the app (email PDF and/or shareable link)

KR: Is there an auto chaser function - refer to Story 3 comment?

1. Cancel an issued invoice with a Credit Note

GIVEN an uploaded invoice in Awaiting Payment or Overdue status
WHEN the client selects "Cancel with Credit Note" and completes the Credit Note flow
THEN the invoice moves to **Void** (non-editable)

1. Reconcile against a payment

GIVEN an invoice has been issued and a payment is received into the client's Statrys Business Account
WHEN the system auto-suggests a matching transaction and the accountant validates the reconciliation in the Accountant Dashboard
THEN the invoice status updates based on the matched amount (see Reconciliation Outcomes below)
AND a fully matched invoice is marked Paid and becomes non-editable
AND a partially matched invoice is marked Partially Paid with the remaining outstanding balance displayed

- KR:
- Default payment method **must** be client's Statrys BAA/C, with option to change to their other BA but it should be difficult to change
 - Strictly cannot be deleted or edited after Invoice becomes Paid

Rules

File Constraints

Constraint	Rule
Accepted file types	PDF, JPG, PNG
Maximum file size	10 MB (default — to confirm)
Unreadable / corrupt / unsupported file	Reject at upload with a clear error

OCR Failure Handling

KR: How do we determine data accuracy? E.g. How does OCR differentiate between issue date and due date?

Scenario	System Behaviour
Nothing extracted	Show an error; let the client enter details manually or re-upload
Low-confidence fields KR: How does OCR determine which are low-confidence fields?	Flag those fields for the client to verify before issuing
Mis-mapped fields	Client corrects them in the review/edit step
Unsupported / unreadable file	Reject at upload (see File Constraints)

Duplicate Invoice Number

Condition	System Action
User-entered invoice number already exists	Warn, allow override

Invoice Status Matrix

Status	Editable?	Entered When	Deletable?
Draft	Yes	After OCR, before issuing	Yes
Awaiting Payment	Limited	Invoice issued	No
Overdue	Limited	Awaiting Payment and due date has passed, unpaid (client is notified)	No
Void	No	Cancel with Credit Note completed	No

Reconciliation Outcomes

Matched amount vs invoice amount	Reason	Status	Validation required
100% matched	-	Paid	Auto — no accountant action needed
Less than invoice amount	FX conversion difference or bank fee deducted	Paid	Accountant must confirm reason before closing
Greater than invoice amount	FX conversion difference or bank fee deducted	Paid	Accountant must confirm reason before closing
Less than invoice amount	Genuine partial payment (instalment or underpayment)	Partially Paid	Accountant must confirm reason before closing

Greater than invoice amount	Genuine overpayment	Overpaid	Accountant must confirm reason before closing
No match found	-	Awaiting Payment	

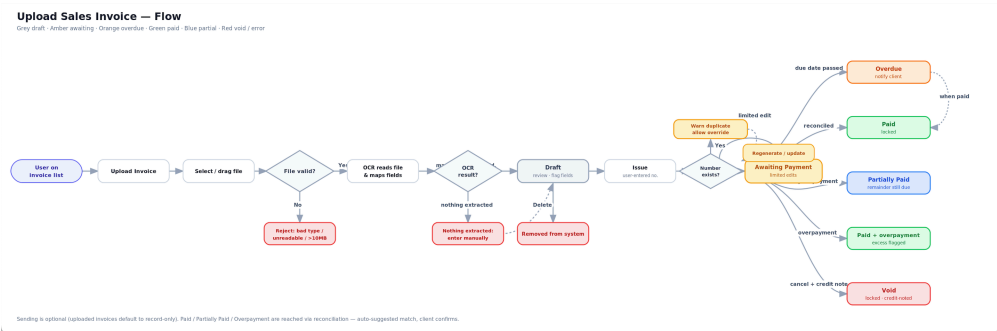

Notes

- Surface: client side is the **mobile app**; the Operation Manager **back office is web**.
- Key difference from the created-invoice flow (STORY3_create_sales_invoice.md): invoice number is **user-entered, not system-generated**, and sending defaults to **record-only**.
- Editing an issued invoice** is limited: if it was sent from the app, the edit regenerates and re-sends the document; if it is record-only, the edit just updates the stored record.
- Overdue** notifies the Statrys client (the sender) only.
- Reconciliation** here is covered at the status-outcome level; the detailed transaction-matching mechanism is a separate story.
- Out of scope: the Credit Note flow itself, and overpayment resolution mechanics (credit note vs refund).

Things Not Clear

- Maximum file size** confirmation (defaulted to 10 MB).
- Which exact fields make up the **"limited edits"** set allowed on an issued invoice (shared with STORY3_create_sales_invoice.md).

Kiru's comments

Acceptance Criteria

1. **Upload an invoice file**
2. **Extract details by OCR for review**

GIVEN a valid uploaded file

WHEN the system reads it and maps fields by OCR [KR: Details required on invoice is not listed here. Please see Story 15 > Rules > Fields. These fields apply to Client Facing side also]

1. **Issue the invoice using the user-entered invoice number**
1. **Send is optional**

KR: Is there an auto chaser function - refer to Story 3 comment?

1. **Cancel an issued invoice with a Credit Note**
1. **Reconcile against a payment**

[KR: Important point, across all reconciliation process. Auto reconciliation can be done when Statrys BA A/C is used for transactions. And ACC validates all reconciliations, not the client. Client does not do any reconciliation.]

GIVEN an issued invoice and incoming transactions on the payment side

WHEN the system auto-suggests a matching transaction and the client confirms the match KR: ACC validates the match, not client. Reconciliation is in Block 3, where auto reconciliation is to be discussed.

THEN the system sets the status based on the matched amount (see Reconciliation Outcomes below)

AND a fully matched invoice becomes **Paid** (non-editable)

KR:

- Default payment method **must** be client's Statrys BAA/C, with option to change to their other BA but it should be difficult to change
- Strictly cannot be deleted or edited after Invoice becomes Paid

Rules

OCR Failure Handling

KR: How do we determine data accuracy? E.g. How does OCR differentiate between issue date and due date? -

Scenario	System Behaviour
Nothing extracted	Show an error; let the client enter details manually or re-upload
Low-confidence fields KR: How does OCR determine which are low-confidence fields? -	Flag those fields for the client to verify before issuing
Mis-mapped fields	Client corrects them in the review/edit step
Unsupported / unreadable file	Reject at upload (see File Constraints)

Reconciliation Outcomes

KR: When payment is less than/greater than total, this could also be due to FX (very high chance for all Statrys clients) and bank fees. Auto matching will not be able to identify due to such difference. This means, an invoice is Fully Paid, not partially/overpaid. ACC validation is required for reconciliation where matched amount is less/greater than invoice amount.

Comment by [Beatrice Ozanne](#) [27/Jun/26]

Acceptance Criteria

[KR: Details required on invoice is not listed here. Please see Story 15 > Rules > Fields. These fields apply to Client Facing side also] - **Listed in Sales Invoice settings** - <https://statrys.atlassian.net/browse/DES-764>

1. Send is optional

KR: Is there an auto chaser function - refer to Story 3 comment? - **Listed in Sales Invoice settings** - <https://statrys.atlassian.net/browse/DES-764>

1. Reconcile against a payment - See above

GIVEN an invoice has been issued and a payment is received into the client's Statrys Business Account
WHEN the system auto-suggests a matching transaction and the accountant validates the reconciliation in the Accountant Dashboard
THEN the invoice status updates based on the matched amount (see Reconciliation Outcomes below)
AND a fully matched invoice is marked Paid and becomes non-editable
AND a partially matched invoice is marked Partially Paid with the remaining outstanding balance displayed

Rules

OCR Failure Handling

KR: How do we determine data accuracy? E.g. How does OCR differentiate between issue date and due date? - **Tech Implementation (OCR/AI)**

Reconciliation Outcomes

Matched amount vs invoice amount	Reason	Status	Validation required
100% matched	-	Paid	Auto — no accountant action needed
Less than invoice amount	FX conversion difference or bank fee deducted	Paid	Accountant must confirm reason before closing
Greater than invoice amount	FX conversion difference or bank fee deducted	Paid	Accountant must confirm reason before closing
Less than invoice amount	Genuine partial payment (instalment or underpayment)	Partially Paid	Accountant must confirm reason before closing
Greater than invoice amount	Genuine overpayment	Overpaid	Accountant must confirm reason before closing
No match found	-	Awaiting Payment
