Description

Background

A sales invoice is the primary billing document issued by the client to their customers or vendors. Fields are drawn from three sources: account settings (company info, logo), system generation (number, status, type, source), and client input at creation time. This story defines every field on the sales invoice, its source, data format, default value, and whether the client can edit it.

Goal

Define all fields on a sales invoice, their source or default value, and the full set of elements the client can edit or customise.

Acceptance Criteria

1. Auto-populated fields pre-fill on invoice creation

GIVEN a client creates a new sales invoice
WHEN the invoice form opens
THEN all fields marked as Auto-populated in the Invoice Fields table below are pre-filled without client input
AND system-generated fields (invoice number, status, type, source) are read-only and cannot be edited

1. Client can edit all editable fields before issuing - Strictly cannot be deleted or edited after Invoice becomes Paid

GIVEN the invoice form is open
WHEN the client fills in or reviews the pre-filled content
THEN they can edit all fields marked as Editable in the Invoice Fields table below
AND changes to line items are reflected in real time in the calculated totals

1. Client can add, edit, and remove line items

GIVEN the client is building an invoice
WHEN they interact with the line item section
THEN they can add new lines using the Add Line button
AND they can remove existing lines using the Remove Line button
AND each line amount is calculated automatically as quantity × unit price

1. Account-level settings apply automatically to all invoices

GIVEN the client has configured their company information and logo in account settings
WHEN a new invoice is created
THEN company info and logo are applied automatically without requiring client input per invoice
AND these fields are not editable on the invoice form itself

1. Client can enable or disable the automated chaser per invoice

GIVEN the client is creating or editing a sales invoice
WHEN they view the invoice form
THEN an Automated chaser toggle is displayed, defaulting to the account-level chaser setting

AND when enabled, the system automatically sends reminder emails to the customer for this invoice according to the chaser schedule configured in account settings

AND when disabled, no automated reminders are sent for this invoice regardless of the global setting

AND the toggle state can be changed at any time while the invoice remains unpaid

AND once the invoice is marked Paid, the chaser is automatically deactivated

Rules

Invoice Settings Field Rules

Field	Type	Required	Notes
Company Info	From Invoice Settings	Yes	Default company information
Company Logo	From Invoice Settings	No	Optional
Payment Method	Dropdown - Statrys Primary VA - Other Statrys VA - Other bank accounts maintained by client	Yes	Statrys Primary VA by default
Invoice Number (KR: Unique identifier)	System-generated	Yes	Format INV-YYYY-##### (from 000001); generated on Create Invoice
Customer Information (i.e. Statrys' Customer info)	Dropdown (+Add if none saved)	Yes	On select, displays the Client Information form data
Customer/Vendor Address & Contact	System-generated text	Yes	From the selected client
Issue Date	Calendar modal	Yes	DD/MM/YYYY; defaults to current date
Due Date	Dropdown (15 / 30 / 45 / 60 days or custom)	Yes	DD/MM/YYYY
Invoice Type	System tag	Yes	Sales vs Expense
Invoice Source	System tag	Yes	Created vs Uploaded
Invoice Status	System tag	Yes	Defaults to Draft
Currency	Dropdown	Yes	Defaults from the client's Default Invoice Currency (Invoice Settings); fixed, not chosen per invoice

Invoice Line Fields

Field	Type	Required	Notes
Item Name	Text	Yes	Item title
Description	Text	Yes	Description of the sales item
Quantity	Number	Yes	
Unit	Dropdown	Yes	unit / hour / day / month / session / pair
Unit Price	Number	Yes	In invoice currency
Amount	Number (2 dp)	Yes	Quantity × Unit Price
Remove Line / Add Line	Button	—	Manage line items
Automated chaser	Toggle (On / Off)	Yes	Editable — per invoice

Discount & Summary

Field	Type	Notes
Discount per invoice	Amount / percent	Optional
Subtotal	System (2 dp)	Sum of all invoice line amounts
Total Discount	System (2 dp)	Shown only if a discount is entered
Total	System (2 dp)	Total after discount

Company Logo Upload Rules

File Limitations	Expected Behavior	Notes
Size	Allowed: <=10MB More than this will be declined	
Format	Allowed: 'JPG', 'JPEG', 'PNG' Other file format will be declined	

Invoice Settings Application Rules

Condition	Expected Behavior	Notes
Sales invoice is created	Default invoice settings are used as the standard invoice settings	Applies to sales invoices
Invoice settings are updated	Updated settings apply to subsequent invoice use	Impact on invoices with draft status and new invoices
Company logo is not provided	Invoice can still use saved company details without logo	Logo is optional

Notes

- Company info and logo are set once in account settings and applied to all invoices. They are not editable per invoice.
- Customer / vendor address and contact info auto-fills from the selected client record. To update it, the client must edit the client record — not the invoice.
- The Amount in functional currency field is an internal field for the accountant's view only. It does not appear on the invoice document sent to the customer.
- The COA account assignment per line item is an accountant-only field, visible only in the admin / accountant app. It does not appear on the client-facing invoice.
- Invoice status transitions automatically based on system events (payment received, voided). The client cannot manually set a status except via explicit actions (e.g. mark as paid, void).
